Webinar Description

In this training session, you'll learn how to create a stunning, interactive professional-looking dashboard using Excel. This training will provide you with a solid foundation that you can use to build your own dashboards and reports.

No matter what business you are in, a dashboard is a critical tool in your communication armoury and as with any communication tool, a presentation is everything. Although there are many tools that can be used to create a dashboard, Excel is commonly used due to its power, it's flexibility and the fact that most people have it installed on their computer.

This training focuses on what you need to know to create an interactive professional-looking dashboard using Excel.

Who Should Attend ?

This webinar is for any user of Excel who wants to learn how to create Excel dashboards.

You should have an intermediate level of Excel knowledge and preferably know how to create a basic pivot table.

The training will be delivered using the latest version of Excel for Windows although much of the functionality is available in earlier versions of the application.

Why Should Attend ?

You'll learn how to make the dashboard maintenance-free when new data becomes available; create the pivot tables needed to drive the dashboard; create great looking visuals; add interactivity using slicers; automate elements of the dashboard with a macro and protect the cells containing critical formulas.
