Date : July 14, 2021

Time : 01: 00 PM EST

Duration : 90Minutes

Price: \$149

Webinar Description

Project partnering is one of the most effective tools in the construction management process employed to deliver successful projects -- projects that complete on time, within the budget, safely, with the specified quality, and have no outstanding disputes at the end of the job. Construction Managers are frequently the leaders in convincing owners to adopt project partnering and must be involved in the entire process if partnering is to be successful. This webinar provides the results of a study concerning the cost and the success of project partnering with respect to minimizing construction disputes. The webinar identifies the characteristics, the drivers, the phases, and the elements of successful partnering. The obstacles to and potential downsides of successful partnering are discussed along with the benefits realized from successful project partnering. The webinar identifies and discusses eight case studies across the country to discover whether partnering reduces disputes & illustrates the "best in class" partnering results.

Topic Background

Claims on construction projects are inevitable. However, disputes (arbitration or litigation) are not. This webinar discusses project partnering to mitigate claims and avoid legal disputes. The webinar provides actual metrics from major owners across the U.S. who measured change orders, project delays, and construction claims before and after they implemented partnering as a standardized practice.

Who Should Attend ?

- *Owner & Contractor Project Managers*
- *Resident Engineers or Architects*
- *Agency Construction Managers*
- *Construction Managers @ Risk*
- *Design Managers*
- *Legal Counsel Representing Owners or Contractors*

Why Should You Attend ?

- *Be aware of what project partnering is and is not*
- *Understand the characteristics, drivers, phases, and necessary elements required to make partnering a success on a construction project*
- *Become familiar with the obstacles and potential downsides of partnering*
- *Be exposed to the costs of partnering on average projects*
- *Learn about the benefits of successful project partnering based upon a few case studies*
- *Discover the “best in class” partnering results*
