On-Demand Webinar

Duration : 90 Minutes

Price: \$200

Webinar Description

The evolution of computerized technologies has been both amazing and challenging. Each new wave of technological evolution has been accompanied by a series of compliance challenges, and subsequent strategies to comply with applicable regulatory requirements. Cloud computing is a current example of this evolution. This presentation will provide a discussion of Cloud concepts, terminology, definitions, architecture, and services; review the contradictions and challenges of using a cloud environment to support regulated activities; discuss assessments of cloud hosting facilities; and stress the importance of a detailed Service Level Agreement (SLA).

Who Should Attend ?

Project/Strategic Management

Assurance staff

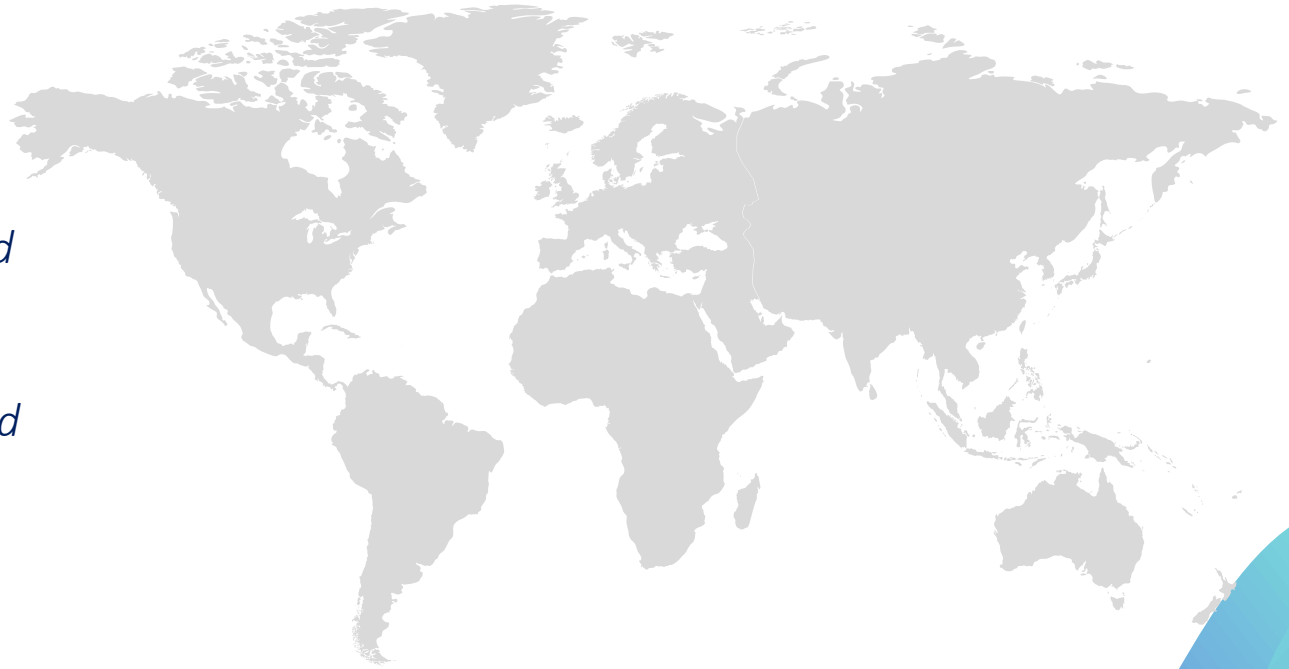

IT staff

Operations staff

Why Should Attend ?

Cloud computing has become perhaps the hottest compliance topic related to computer validation and electronic records. The potential economic and resource advantages to using cloud-based environments guarantees that management will expect that compliance strategies will be developed that will support decisions to utilize cloud environments to perform regulated activities. This presentation will provide a baseline of information related to cloud computing which will help the attendee better understand the cloud concept, associated regulatory challenges, and suggestions for consideration when establishing a cloud-based system.
