In this course, you will hear from industry leader Dr. Locwin discuss the best methodologies to employ in initial KPI development, as well as practical approaches and tools for monitoring KPIs for adverse trends.

On-Demand Webinar

Duration : 60 Minutes

Price: \$200

Webinar Description

In this course, you will hear from industry leader Dr. Locwin discuss the best methodologies to employ in initial KPI development, as well as practical approaches and tools for monitoring KPIs for adverse trends.

Key Performance Indicators (KPIs) are used in every major company across the world that has achieved any level of success, and with good reason – You can't know where to invest next to improve the future if you don't have proper measures of where you are 'now'!

Unfortunately, many companies purvey totally useless, spurious, and erroneous KPIs to drive internal business decision-making. The reason why you don't hear about this more often in business intelligence publications is because corporations don't collect data on their own internal flaws with designing KPIs and how they perform (actual) versus what they expected. This would drive their shareholders mad! Though in actual fact, shareholders would love to know this information – it would make their investment decisions that much more accurate and timely.

By properly defining business needs, internal processes, and performance outcomes, your organization can benefit from much more scientific management of resources and better decision-making.

Who Should Attend ?

*Level 1: Quality Assurance, Quality Control,
Compliance, Regulatory*

*Level 2: VPs, Directors, Managers, Specialists,
Analysts*
