

Webinar on

Quality System Management Effectiveness

Learning Objectives

- What are the components of a proper Quality Management System?*
- What it means to build a “culture of quality” that reaches to the whole organization*
- How you can effectively collaborate on quality management while keeping it simple*

Areas Covered

- Cost of quality*
- What is Quality Management all about?*
- Tools for Continuous Quality Improvement*
- Discussion of what to do when major quality problems are found*

Quality management training will cover principles of QMS that will help your organization implement a QMS that is repeatable and efficient.

PRESENTED BY:

Danielle DeLucy, MS, is owner of ASA Training and Consulting, LLC which provides Pharmaceutical and Biologics based companies with training and quality systems assistance in order to meet Regulatory compliance.

On-Demand Webinar

Duration : 90 Minutes

Price: \$200

Webinar Description

Quality management training will cover principles of QMS that will help your organization implement a QMS that is repeatable and efficient. A good QMS consists of standards and guidelines relating to their everyday business practices including but not limited to policies/procedures (or a Quality Manual), SOPs, and Work Instructions.

It's the common, centralized culture of quality that many people struggle with. Quality management has a very important role but needs to be “consumable” by multiple operational areas within the organization. So how can organizations create a simple, consumable way to gain broad visibility into Quality management, while making it easy and centralized? This webinar will review the variables needed in order to create a solid Quality Management System.

Who Should Attend ?

QA staff and management

Compliance Personnel

Regulatory Affairs staff and management
