On-Demand Webinar

Duration : 60 Minutes

Price: \$200

Webinar Description

The new rule was highly anticipated by industry and will hopefully bring clarity to the long-standing GMO questions, cover financial and risk impact to businesses as well as helping consumers with educated food choices based on science, in short session encapsulates everything industry needs to know on launching the NBFDSA.

Who Should Attend ?

Labeling techs

R & D

Purchasing

Developers

Quality Control/Assurance and Food Safety professionals

Corporate quality managers

Senior management

Third parties developing HACCP plans

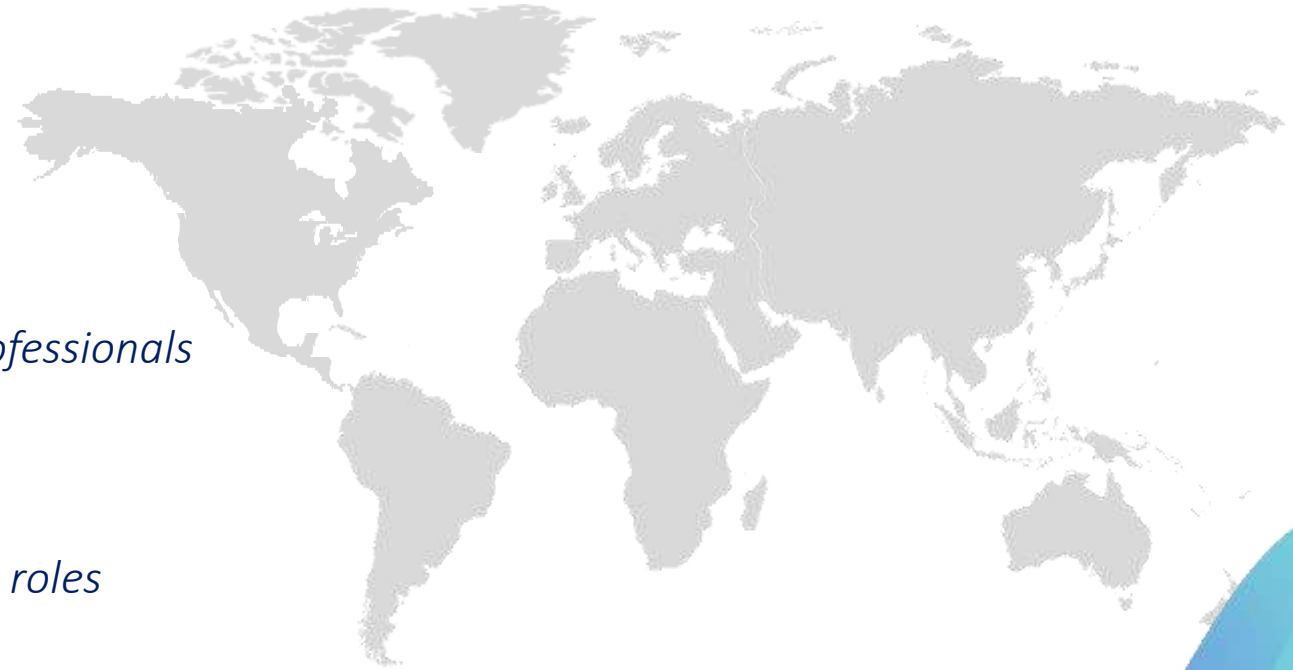

Auditors and those with food safety inspection roles

Validation specialists

Consultants

Quality system auditors

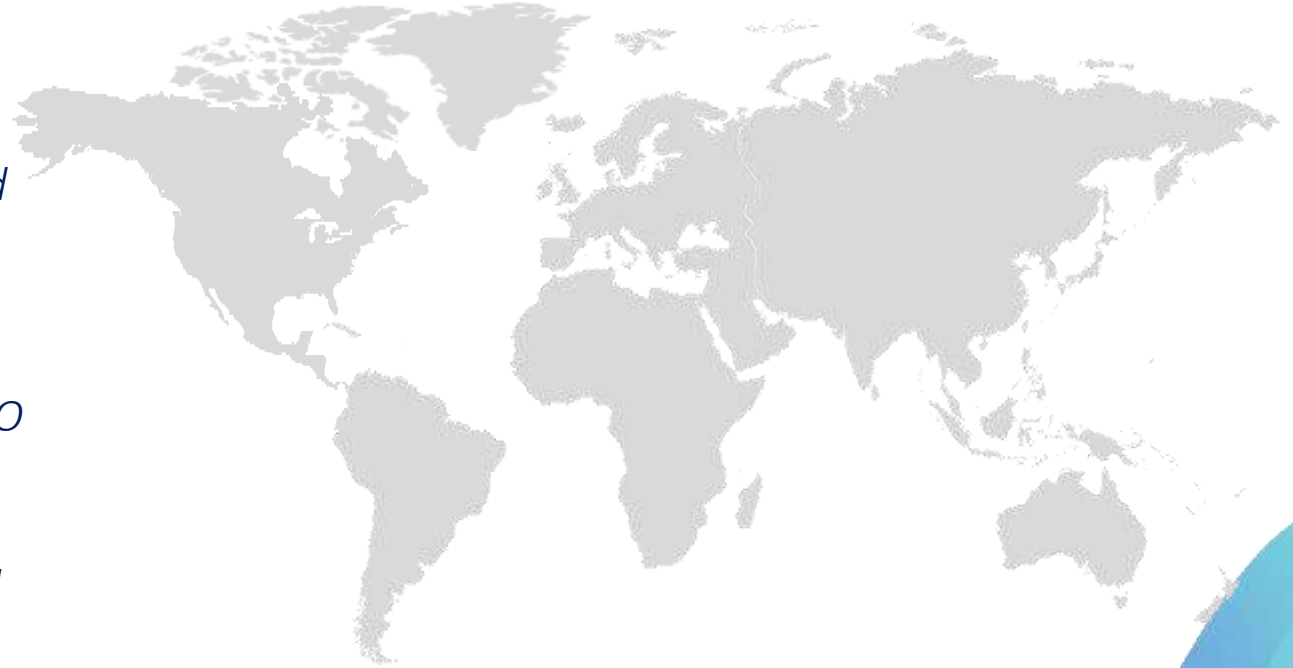

PCQI's

Why Should Attend ?

The long-awaited new GMO Food Labeling regulation is known as the National Bioengineered Food Disclosure Standards Act (NBFDSA) has been issued by the USDA. This regulation delivers a federal standard leveling the playing field to industry and consumers often confused about GMO product labels.

Under this rule, all foods containing bioengineered ingredients (BE) must be disclosed, meet recordkeeping and compliance requirements. Definitions of foods subject to the ruling, exclusions, responsible parties, mandatory disclosure options, recordkeeping, and implementation dates will be covered in this session.
