Jim is the Principal, James Zack Consulting, LLC, and Senior Advisor, Ankura Construction Forum™. The Forum strives to be the construction industry's resource for thought leadership and best practices on avoidance and resolution of construction project disputes globally. Formerly he was the Executive Director of the Navigant Construction Forum™

On-Demand Webinar

Duration : 90 Minutes

Price: \$200

Webinar Description

In order to deliver successful projects on time and in the budget, owners and contractors must know how to manage changes to the work during the construction period. This webinar discusses how and why changes arise during the project's construction phase; what owners can and cannot change; the types of change to the work in progress; how each type of change order should be handled on the site; the rules of contract interpretation; what damages may be owed under the Changes clause; and how changes can be resolved on the project site.

Change orders on construction projects are inevitable. They are a fact of life in construction and act as a safety relief valve for both owners and contractors during the course of construction. While changes cannot be stopped altogether, they can and must be managed for the benefit of both the owner and the contractor. This webinar focuses on the management of change orders and the change process.

Who Should Attend ?

Owner & Contractor Project Managers

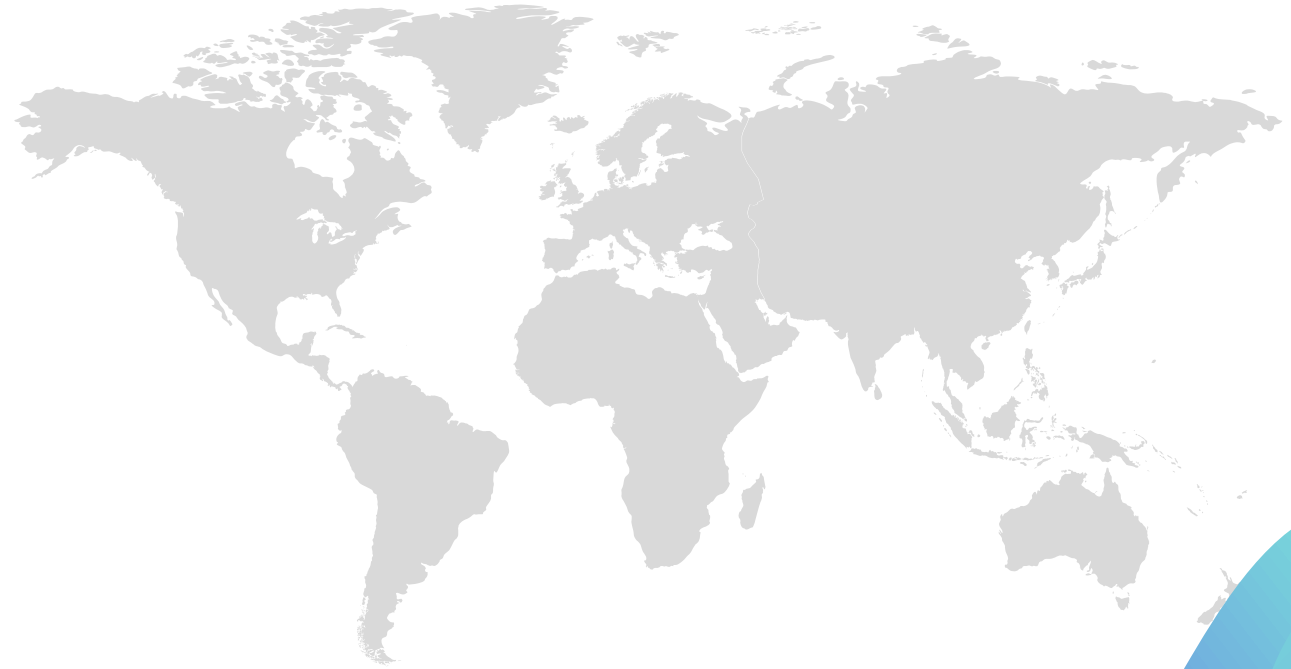

Resident Engineers or Architects

Agency Construction Managers

Construction Managers @ Risk

Design Managers

Legal Counsel representing owners or contractors

Why Should Attend ?
