On-Demand Webinar

Duration : 60 Minutes

Price: \$200

Webinar Description

IT governance (ITG) is defined as the processes that ensure the effective and efficient use of IT in enabling an organization to achieve its goals. Organizations today are subject to many regulations governing the protection of confidential information, financial accountability, data retention, and disaster recovery, among others. They're also under pressure from shareholders, stakeholders, and customers.

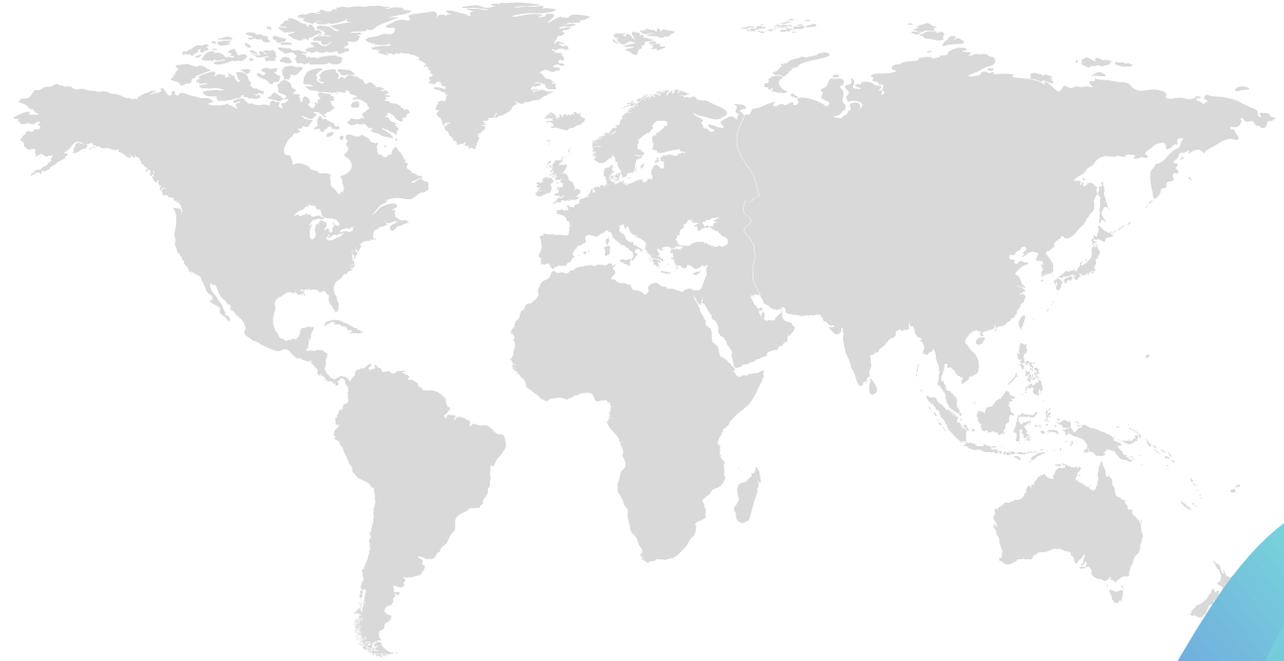

To ensure they meet internal and external requirements, many organizations implement a formal IT governance program that provides a framework of best practices and controls.

Governance of the organization's current and future use of IT including management processes and decisions related to the current and future use of IT. These processes can be controlled by IT specialists within the organization, external service providers, or business units within the organization.

Who Should Attend ?

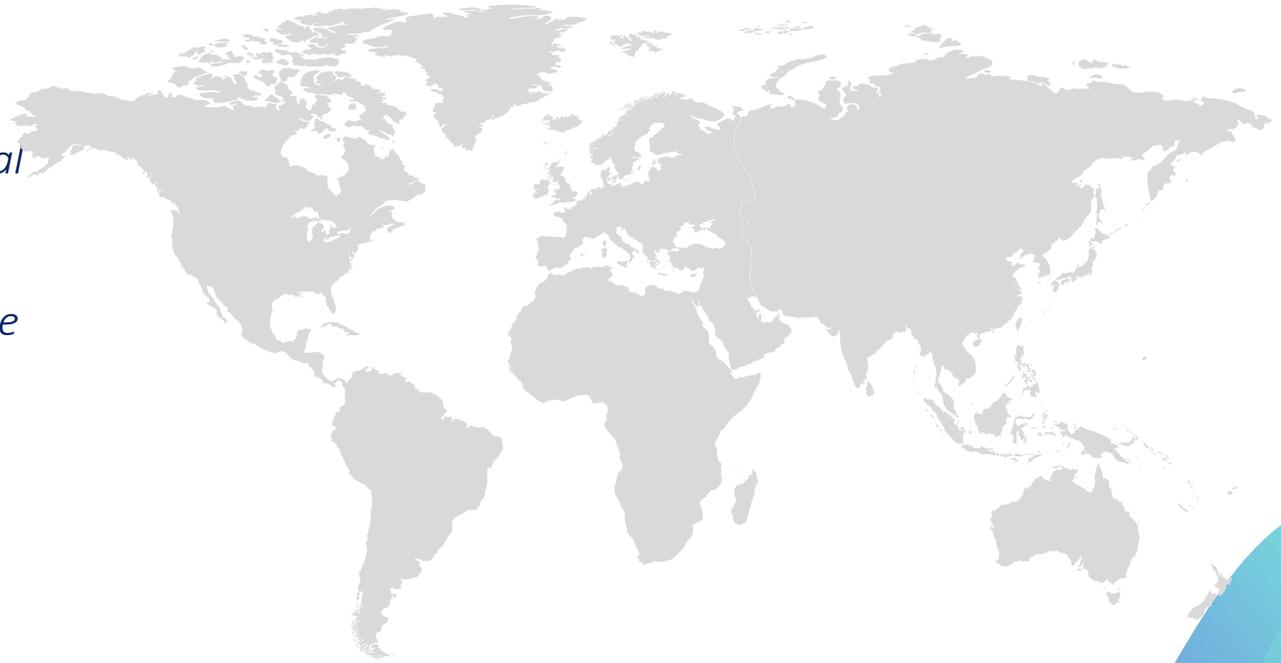

Financial, Insurance, Manufacturing

Why Should Attend ?

IT governance provides a structure for aligning IT strategy with business strategy. By following a formal framework, organizations can produce measurable results in achieving their strategies and goals. A formal program also takes stakeholders' interests into account, as well as the needs of staff and the processes they follow. In the big picture, IT governance is an integral part of overall enterprise governance.

Attend this session by our expert speaker, Dr. Michael C. Redmond, and learn Principles Effective IT Governance, Risk and Compliance in 2019 and beyond. Michael will help your organization to manage the complexities of Creating a robust IT Governance Program. You will learn your responsibilities for protecting data and your legal liabilities. This session will enable you to gain knowledge on the implementation of a framework and controls to safeguard your client's data. You will receive valuable information that you can implement. This is a must in the new world that is facing new risks every year.
