evaluating acute care and
community case
management models,
educating case management
professionals and assisting in
the implementation of case
management departmental
changes.*

On-Demand Webinar

Duration : 60 Minutes

Price: \$200

Webinar Description

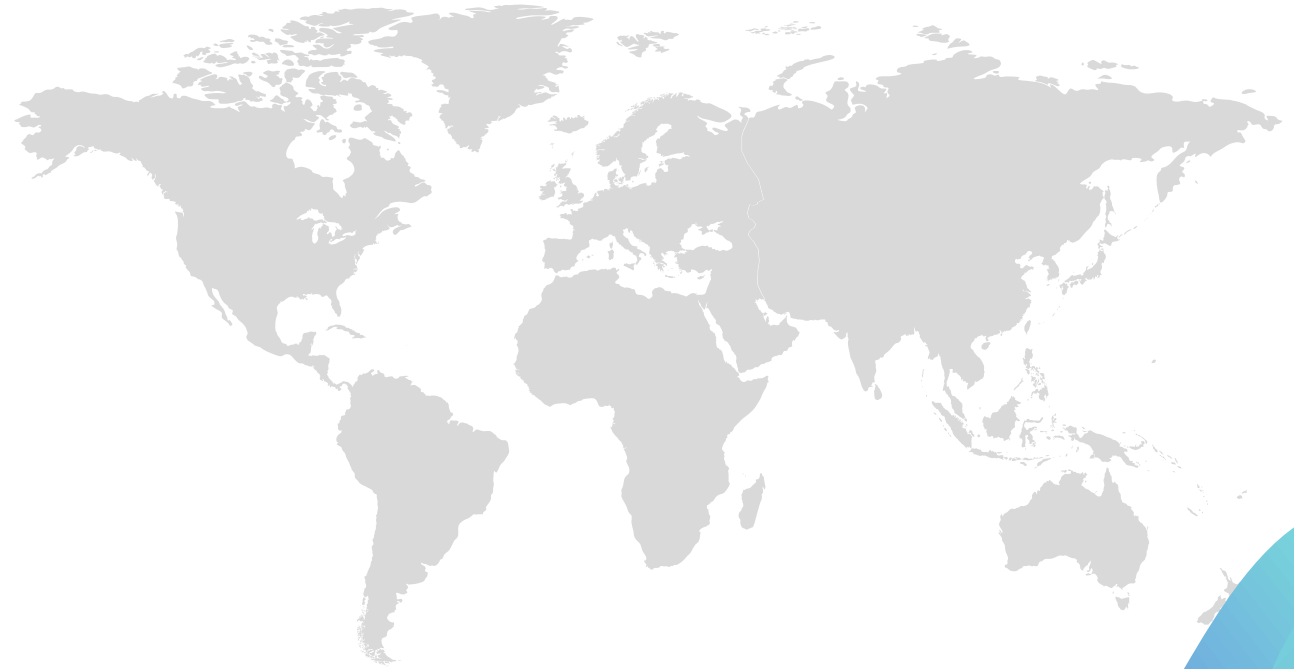

This webinar will identify the key stakeholders needed for effective interdisciplinary rounds. It will review the best practice rounding processes including scripting and time management. Following this, we will discuss how to hardwire your rounding process so that it remains timely and efficient. The roles of each team member will be included as well as how to involve the patient and family in the bedside rounding process. Also important is the documentation of rounds either during or after they occur, so suggestions for effective documentation as well as a template for documentation will be included. Finally, strategies for how to evaluate your rounding process through outcomes metrics will round out this jam-packed program.

Interdisciplinary care rounds are moving front and center as a key strategy for coordinating care, managing length of stay and improving patient and family satisfaction. It is also a component of the Joint Commission's Safety Standard #2. According to the Joint Commission, best practice for these rounds includes the full interdisciplinary care team with rounds conducted at the patient bedside. Case managers play a key role in these rounds as either leaders or participants in the process.

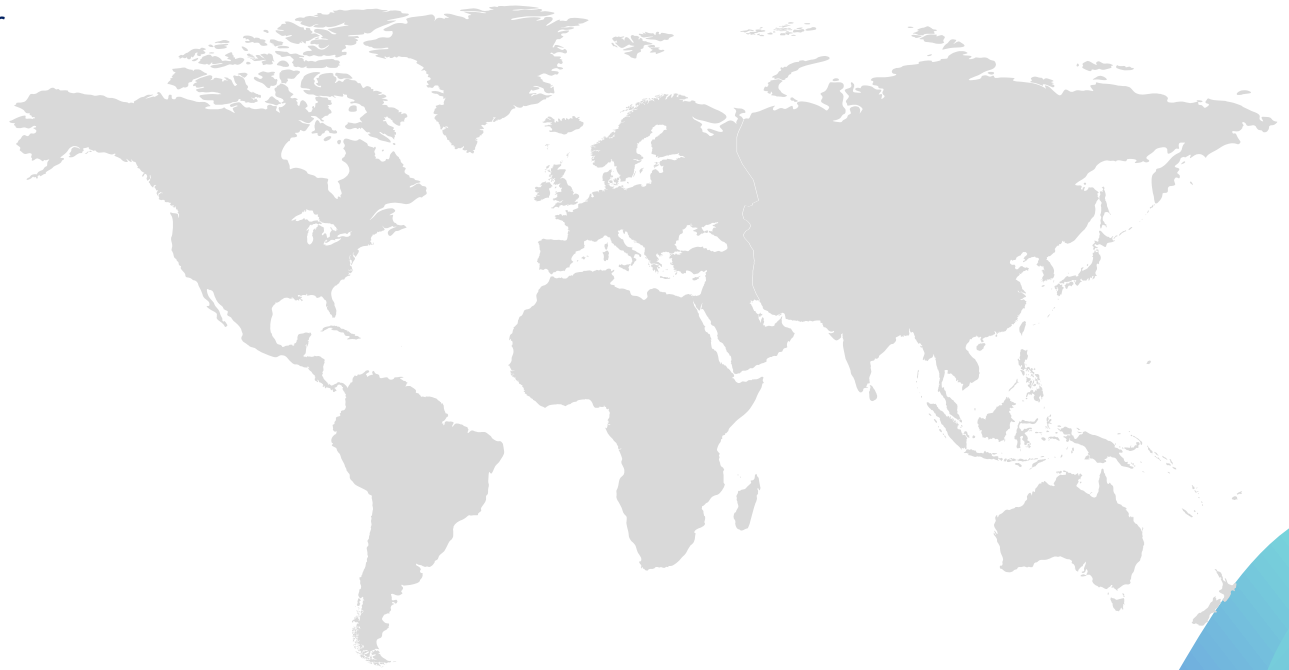

Who Should Attend ?

Director of Case Management
Director of Social Work
Case Managers
Social Workers
Vice President of Case Management
Director of Quality
Nursing Director
Nursing Vice President
Hospitalist
Physician Advisor
Emergency department physicians

Why Should Attend ?

Many hospitals either have no rounding process or have a dysfunctional process. Sometimes rounds can take hours as they are combined with medical teaching rounds or change of shift report. Therefore, it is important that organizations understand the best practices in interdisciplinary care rounds, particularly walking rounds. This program will focus on the roles of each team member in the rounding process. Included will be the physician, the resident or hospitalist, the staff nurse, the case manager, the clinical pharmacist, and the documentation improvement, specialist. Other communication strategies to be covered will include patient care conferences, huddles, and internal transfers. Also included will be strategies for planning for rounds and how to script the team members to optimize the time spent discussing each patient. Key structural points for you to include while developing your own rounding process will also be included.
