PRESENTED BY:

Willi Ramseier is the pragmatic system thinker, project management skills, risk management know-how, expertise in CAPA system and QMS (quality management system), a consultant for general quality issues (especially for start-ups)

On-Demand Webinar

Duration : 60 Minutes

Price: \$200

Webinar Description

Some regulatory guidelines mention the need of a QMS. But every company should have a library for its biggest asset – the knowledge of the employees.

The reason to have a QMS is not to satisfy the regulators, but for any employee to find the reason for doing the work they should do and how it is connected to the rest of the company.

Any of you who wants to do a good job needs to know the reasons, rules, and standards in this company and on that job. A QMS is therefore essential, and this webinar can help you to understand the basics of a QMS and how important your part is in saving the company resources and be compliant.

Who Should Attend ?

Quality Assurance Professionals

Validation Professionals

Standards and SOP Professionals

Data Management Professionals

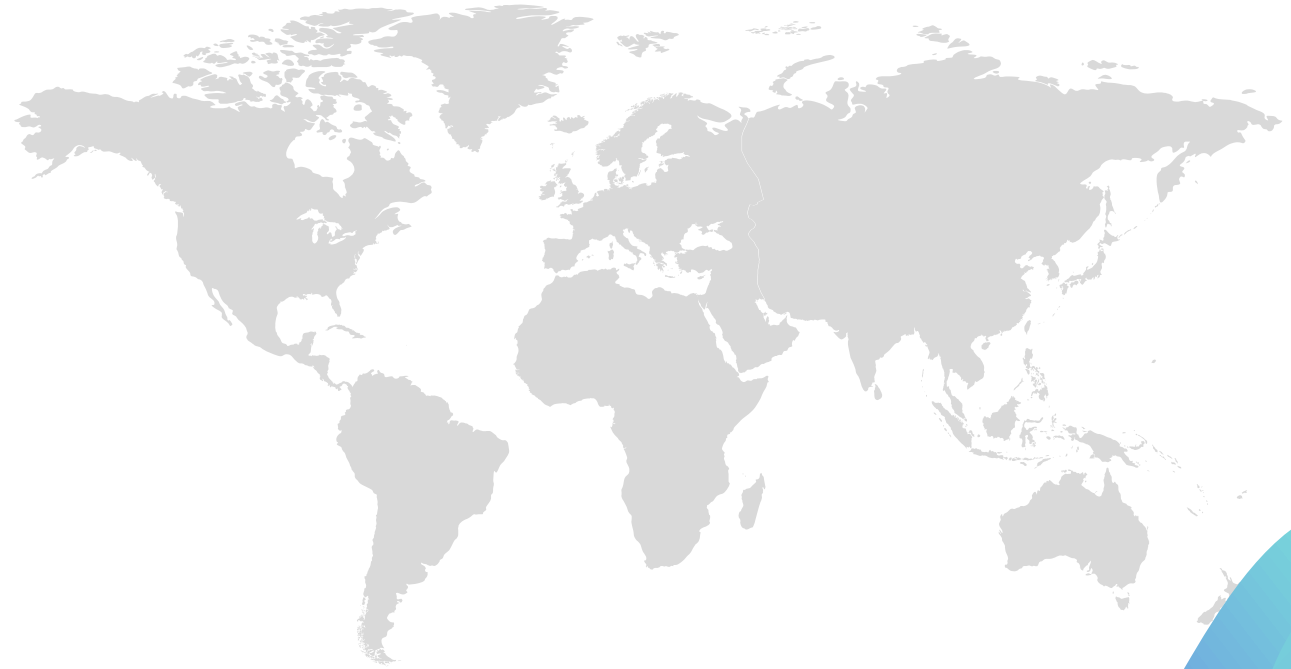

Electronic Systems Developers

The inspection readiness team

Clinical and medical device Operations

Professionals

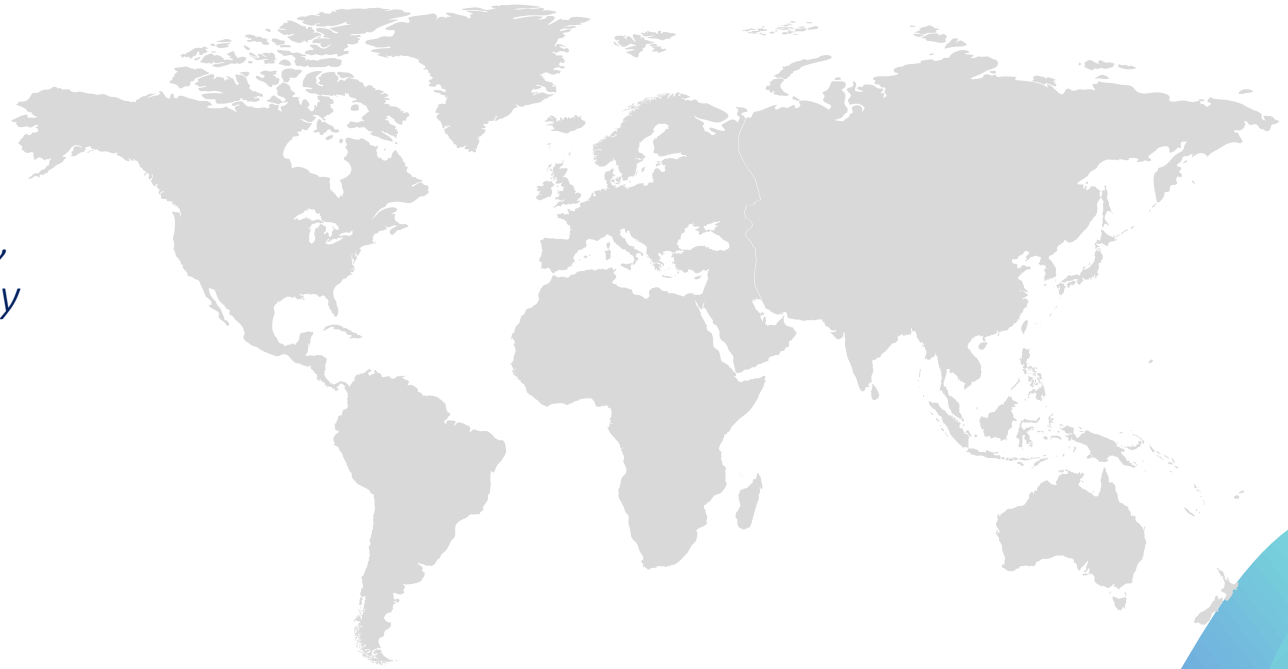

Project leaders

Why Should Attend ?

The cost of not finding something at an inspection, or of missing knowledge can be staggering. Having to do things a second time, because of lost know-how, costs resources. Any auditor or inspector can ask you to show, why you do what you do in comparison to the framework of the company.

Most companies working in the health area have defined the safety of patients, their clients, as one of their main goals within their overall policy. This is The base-stone; everything within this company is build-on.
