On-Demand Webinar

Duration : 60 Minutes

Price: \$200

Webinar Description

ISO 27001 describes how to manage information security in a company. According to its documentation, ISO 27001 was developed to "provide a model for establishing, implementing, operating, monitoring, reviewing, maintaining and improving an information security management system." By applying ISO 27001 standards effectively in your organization you can ensure a robust security for your organization's vital information assets.

Protecting your organization's information is critical for the successful management and smooth operation of your organization. Utilizing ISO/IEC 27001 information security management systems aid your organization in managing and protecting your valuable data and information assets. ISO 27001 not only helps to keep your confidential information secure but also provides customers and stakeholders with a confidence in your risk management system while ensuring you are meeting legal obligations.

ISO 27001 Information System Management System (ISMS) is a systematic approach to managing sensitive company information so that it remains secure. It includes people, processes and IT systems by applying a risk management process.
